

ACM Detection Procedure

Overview

This procedure is for the handling of Asbestos Containing Materials (ACM) when detected in a load/rejected load. This procedure is designed to provide guidance to the personnel involved in the process, ensuring that all activities are carried out in a safe and effective manner.

Step1: Isolate

- Ensure bin tarp is closed.
- Isolate the tipper to prevent contact with people or accidental disturbance of the asbestos, which could release harmful fibres into the air.

Step 2: Tag Out/Lock Out

- If the vehicle can be isolated using the battery isolator, then Lock Out the vehicle.
- If the vehicle does not have an isolator, then the vehicle must be Tagged Out.

Step 3: Engage a Licenced Third Party

- Notify and engage the services of a third party that is licenced to safely remove the asbestos from the site.
